download. Outline of personality disorders The following outline is provided as an overview of and topical guide to personality disorders: Personality disorders – often categorised by the Diagnostic and Statistical Manual of Mental Disorders, 4th edition (DSM-IV), are personality traits of enduring and inflexible attitudes, beliefs, and behaviours that cause distress or impair functioning. According to a 1995 study by the World Health Organization, personality disorders are estimated to be present in approximately 10% of the world's population, but up to 30% of the population of the United States has a personality disorder. Essence of personality disorders Personality disorder Nomothetic Idiographic Defining personality disorders Etymology The term "personality disorder" is derived from the Latin term *persona*, meaning "person".

Other terms for "personality disorders" are personality disorders, antisocial personality disorder, borderline personality disorder, narcissistic personality disorder, and pathological personality. Clinical description of personality disorders Clinical description of personality disorders DSM-5 The American Psychiatric Association is working on the development of the next version of the DSM, which will include new categories of mental disorders. These changes are expected to be published in 2015.

DSM-5 classification In the DSM-5, a personality disorder has been divided into three clusters: A personality disorder is a mental disorder in which a person's personality is characterised by a pervasive pattern of inner experience and behavior that deviates markedly from the expectations of the individual's culture, is evident in several areas of functioning, and leads to distress or impairment. The presence of a personality disorder is manifested in a set of behaviors and attitudes, including at least five of the following: Diagnostic criteria DSM-5 diagnosis is based on a person's history, as well as results of psychological assessment and behavior tests. The criteria for diagnosing a personality disorder are: An enduring pattern of inner experience and behavior that deviates markedly from the expectations of the individual's culture or subculture, is of sufficient severity or duration as to warrant separate diagnostic consideration and is not transitory and circumstantial (e.g., represented by an episodic pattern 2d92ce491b
