KeepSafe Description: KeepSafe is an easy-to-use program that aims to secure your documents and important files by automatically encrypting them with a randomly generated passphrase. After activating the program, you can open KeepSafe with your documents and share them with users on a LAN network. While it is not an essential feature, the program can be used as a security measure, as the passphrase is automatically generated each time you open it. KeepSafe comes bundled with several templates that you can use to add objects to the database. The application can store unlimited objects, texts and other documents. In addition, it features a full text search engine that may help you find specific items by typing in the keywords associated with them. The text processing options can help you customize your documents even further, adding embedded and linked URLs, footnotes, tables, formulas and other components. The program can save several files per document, enabling you to securely store several versions in case you make a change to one of them. KeepSafe allows you to create versions with a single click and to add comments to each of them. In addition, you can tag folders and customize the password strength. While the program is not suited for people who are looking for a sophisticated application with plenty of options, the software is ideal for novice users that are looking for an easier application to use, as it is very straightforward to use. What's more, the software uses other tools and data to estimate the exact amount of free space you have on your computer. For example, it can check the volume you use the most (you can select it through the program), the directory that is too full, your home directory, the used and unused space of Windows application files, and much more. Additionally, you can easily save the result to a file and open it later, through the inbuilt interface. As the results look similar to Windows Explorer, it is very easy to understand and use GetVolumeInformation. After getting all the information, GetVolumeInformation can save it
