Lazy Addin Description: L 77a5ca646e

The RAS Logger System License Keygen

The RAS Logger System is an easy-to-use system designed to monitor and log remote access sessions and system activities of remote access dial-up and virtual private network (VPN) devices. It allows you to view all of the remote access sessions, including the type of access (Dial-Up or VPN), number of bytes transmitted, date and time of data transmitted, frequency of connections, number of pages printed and number of pages transmitted. The RAS Logger System uses a log file (*.log), which may be created in the system installation directory (default is C:\Program Files\RAS Logger) or you may create a new log file from the system settings dialog. From the log file you may view and print the data or do whatever you wish with it. The log file is automatically named with date and time of data logged. So you may use the log file to easily view the information. You may view logged information on the log file or you may create a new one using the log settings dialog. In case of VPN, The RAS Logger System displays the user name, and the IP address and the port number. You may view the contents of the VPN log file using the same methods as for the dial-up log file. If you wish, you may open the VPN log file by double clicking on it. The RAS Logger System has various features: - Displaying remote access sessions - Displaying connection requests and their frequency - Log file analysis - Printing connection details - Monitoring connection details - Printing printer events - Automatically created log files - Support of remote printer devices - Support of IP cameras - Support of local devices - Support of dial-up modems (PSTN) - Support of IP VPN devices - Support of VNC, RDG and KVP Client - Support of handheld device (Palm) - Support of printing the content of the log file - Export to text files - Backup and restore of log files - Help - System Requirements: - Windows 98, ME, 2000, NT, XP, 2003, Vista, 7, 8, 10 (32-bit or 64-bit versions) - DirectX 9.0 or higher - Min. 1 GB available space - 2 Mb RAM (for 32-bit Windows) or 4 Mb RAM (for 64-bit Windows) - 2 Mb of available swap space - Remote access connection to the printer

What's New in the The RAS Logger System?

-- *The RAS Logger System is designed as a freeware for people who use RAS for making long distance calls and printers for making long distance printouts. *The RAS Logger System is an utility that automatically logs all the activities on your PC and on the dialer or RAS (Home or Host) using the dialer interface as the log is made. *The RAS Logger System will automatically record each of the following: - - The date and time that a call was initiated or a page was printed - - The duration of the call - - The number of bytes sent or received - - The provider you dialed or the provider you used to print the document - - The IP addresses used by your PC and the provider you dialed or used to print the document - - The number of pages printed *The RAS Logger System works with a dialer for RAS and printers (the printer may or may not be connected to a modem). It will record the activity on a serial port that you can connect to a computer, or you can connect the serial port directly to a printer. *With the RAS Logger System, you can log not only the activity from your computer but also from a RAS. You can use it with dialers for RAS such as UxConnection (for use with The RAS Logger System), Kino UxConnection and UxConnection Pro. *With the RAS Logger System you can also record all the activity from your printer. This can be achieved with using printers directly connected to a serial port on a computer. You can either use a connected printer, or you can use a "virtual printer". *The RAS Logger System will enable you to keep a detailed record of all the calls and documents printed over a period of time. You will be able to browse and analyse the information recorded with The RAS Logger System. You will be able to check all the records for a date, or a printer. *The RAS Logger System records your calls

and printed documents using the interface of your dialer or your RAS (if you have connected a printer to your dialer, and you have not connected your printer to the computer). *You will be able to view each of the recorded activities on a specific date, a specific printer or the whole set of activities for a period of time. *The RAS Logger System will show you a graph of all the activities recorded, with details of each call and document printed. *Using the RAS Logger System you will be able to keep track of your charges and you will be able to download the invoices you receive from your provider. *The RAS Logger System will also log the pages printed on a printer. Using the RAS Logger System you will be able to keep track of the

System Requirements:
