Q: How can I get the 'null' key of arraylist in Java? I have a class that extends ArrayList that I need to add to the list. When I want to get the null key for the ArrayList, I used: ArrayList list = new ArrayList(); list.add(new MyClass()); System.out.println("null is at "+list.indexOf(null)); My Question is I can't figure out how to get null from the array list. All the solutions are in the style: list.contains(null) or list.contains(value);. I would like to get true or false based on the array list whether the null key is in it. A: You can use contains as usual, even if you don't have an explicit null. List list = new ArrayList(); list.add(new MyClass()); System.out.println("null is at " + list.contains(null)); It'll report if it is contained or not. Contains checks if the element is in the array. null is an element in the array and it will always be returned as false. Here is the documentation link. Differences in energy intake between the girls with anorexia nervosa (n = 16) and controls (n = 18) were studied and the influence of serum cholesterol levels was evaluated. The girls were given both dietary and laboratory tests. The median energy intake of the patients was 50% lower than that of the controls. The patients ate a typical diet, high in fibre and low in dietary fat, and the patients did not differ from the controls in intake of energy and nutrients. Serum cholesterol was lower in the patients. These results indicate that the girls with anorexia nervosa suffer from a general deficit of energy that leads to a decrease in fat and protein intake.When it comes to getting rid of eye skin, there is a number of home remedies that can help to get rid of eye skin.
